

## Heavy Equipment use on Turf

Driving any type of equipment over the surface of synthetic turf is at the discretion of the owner who assumes all risks and liability for their use. Controlled Products does not recommend driving any type of equipment over the surface of your synthetic turf. However, we know that from time to time scissor lifts or similar equipment may need to be used for maintenance purposes. When this need arises, Controlled Products strongly recommends placing two (2) layers of ½" CDX plywood, laid in an Ashler pattern over the turf to help distribute the weight and reduce the risk of damage to your turf. If loads are greater than 70 psi, specially designed weight distribution panels are recommended.
