HIGHLIGHT REEL

BETTY AND BOBBY ALLISON SOUTH STADIUM

The Betty and Bobby Allison South Stadium is home to the Missouri State Bears men and women's soccer teams. It was renovated in 2014 with the addition of a new, state-of-the-art GameChanger SporTurf™ field. The SporTurf synthetic turf is no comparison to you average Bermuda grass field that you have to water, mow and fertilize. Not only does the maintenance requirements decrease but the synthetic field is much more durable. Now the Bears have an extraordinary field that can take anything the Bears can throw at it.

GameChanger 44

PRODUCT

GameChanger 44Z

FACE WT/PILE HEIGHT

44 oz / 2 in

GameChanger is a field product that should be installed on a compacted aggregate base. The monofilament and slit film turf blades in GameChanger are designed for a "best of both worlds" experience. With monofilament turf blades to control the ball roll and slit film to provide long lasting durability, GameChanger is an excellent choice for all levels of competition.
