

Waverly High

HIGHLIGHT REEL

ROBERT W. PLASTER STADIUM

Recently SportsScapes Construction installed 100,000 square feet of Sporturf™ MT50 for Waverly High School in Ohio. The crew removed the tired natural grass surface and replaced it with a layered stone base which included a brand new concrete curb on the inside of the track surface. Once the stone base and curb were in place it was time for Sporturf™ MT50 to be installed. MT50 is a combination of the high performance monofilament face yarn and a texturized thatch that traps and minimizes infill movement. Dan Hodson of SportsScapes Construction stated, "They (Waverly) really enjoyed the look and feel of the monofilament fiber and thatch layer from the beginning."

Monosport MT50

FACE WT/PILE HEIGHT

50 oz. 2"

Sporturf™ MT50 is a true multipurpose synthetic turf surface. It has revolutionized the way Waverly High School utilizes their stadium. Gone are the days of cancelling practices due to poor field conditions now that they have an all-weather surface. The 15,800 denier system is one of the heaviest on the market and will stand up to just about any use.
